**✖ SEAL NOT ADEQUATE**
Flat applicator was run across the foil surface

✖ SEAL NOT ADEQUATE
Flat applicator was run across the foil surface AND in between the rows/columns

✔ SEAL ADEQUATE
Roller applicator was run across the foil surface AND in between the rows/columns, pressing down **very tightly** to create a **fully concave seal** within each individual well

We recommend **an ink roller like this** that has enough flex in the rubber to be able to push the foil **into** each well to get a **fully concave, tight seal**
